

ECE 285: Course Project

The course project for this course will involve studying and verifying some recent work in sparsity and compressed sensing with preferably an application focus.

- It is expected that you will read about three journal papers on the topic of interest and explain to the class your findings.
- You can work alone or in a team of 2. In case you work in a team of two, it is important that both students are actively involved.
- Your findings will be summarized in a four page conference paper format and is due two days after the final exam date
- The projects will be presented to the class during the time allocated to us for the final exam. The presentations are expected to be about 15 to 20 minutes long.

Timeline

- Present a one page plan for your project along with the list of papers you plan to study on Monday, Feb. 9, for approval.
- A progress report is due on Monday, March 2nd.
