Important Announcement regarding the Data Files for the HTK project.

Please make sure that you well define your datasets for training and testing. The files that contain the paths to the training and testing datasets (hcopy.scp, hcopyTest.scp, train.scp, test.scp) are provided just for your reference. Please do not use/modify these files blindly as there are segments where the pathways are repeated. So modify and define your data sets the way you think is reasonable (e.g. 80% of total data for training and 20% for testing). Also the data in the folder /digits/test doesn’t have to be used for the testing and the data in the folder /digits/train doesn’t have to be used necessarily for the training as you can mix them according to your preference.
